

24 W. PENNSYLVANIA AVE.

Although it is probably not the first pre-fabricated residence in Towson this duplex at # 24 W. Pennsylvania Ave. is the first of its kind to be positively identified as such. The house has a distinctive design featuring unusual shingles, classical details and a hipped roof with large eye-lid vents. The design is believed to be of California origin.

DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

Blueprints in the possession of Marks & Cooke, Architects, document the fact that this house is based on plans for a 1925 pre-fabricated home. According to information printed on the plans the design was by "Pacific Ready-Cut Homes, Inc," of Los Angeles, California. Details appear to have been sketched in by "Frank A. Persohn" of Baltimore (8-7-25). Many of the details such as specific type of roof or wall covering or type of spouting are identified in the plans as "by Buyer" indicating the general nature of the plan and that room was left in the design for individual preferences. The most major difference noted between the suggested plan and the existing structure is that where stucco is recommended by the designers for the exterior wall covering, in actuality wood-grained asbestos shingles were used. Most of the other variables, however, are remarkably similar.

This building is of frame construction and is two stories high resting on a high block foundation. The roof is hipped with large eye-lid vents. The exterior appearance is characterized by the variegated wood-grained asbestos shingles and the beveled formstone foundation blocks. The building is a duplex dwelling that is a total of four bays in width and an equivalent six bays in length. A wooden watertable surrounds the building, as does copper spouting.

The main facade faces Pennsylvania Ave. and is oriented to the South. Each unit of the building has its own entrance reached by a 5'9" x 12'4" porch covered by a portico. Each porch was reached by four steps and constructed of the same blocks as the foundation (altered Winter 1977-78).

The roof is made of grey slate, there are plain wire snow guards and on each facade there are large eye-lid vents with louvres. The south facade, like the others, contains regularly spaced 6/1 wide sash windows.

The east and west sides are identical. Fenestration is consistent in that the placement is regular but the size varies. There are three equally placed pairs of 6/1 windows with smaller 4/1 interspersed between them. Much of the glass is wavy and specked. (original plan calls for four pairs of 6/1 on the "left side.")

South of center each side contains entrances to the second story. These stairs are located within the building but are reached by enclosed exterior entranceways that are characterized by wooden pilasters, parapits and the same shingle and blocks as the front porticos.

The north facade contains a two story gallery that is original. The facade is bisected by a centrally located exterior flue chimney which has been stuccoed. Doors occupy the interior bays and very wide 8/1 sash windows occupy the outer bays. (48" x 36").

On the first level the southern half of the porch is enclosed with the same materials as the rest of the building. This area is perceived to have been a pantry area.

The upper level of the porch is reached by a centrally located wooden stairs which consists of a single flight (8 steps) that breaks at a landing into 90° forks. The upper portion is paneled with vertical tongue-and-groove.

Interior

There is a full basement (8½') finished with concrete and block. The present owner has removed partitions which he believes to have been erected to suit the needs of the optometrist who lived here. Three-light casement windows

CONTINUE ON SEPARATE SHEET IF NECESSARY

light this area, three on each side wall.

Each half of the building is divided into four rooms per floor that are connected by a longitudinally oriented side hall.

Both floors have been converted into offices and there have been at least two renovations. It was noticed in the upper story of the west half of the building that there are built-in linen cupboards in the hall (drawers and shelves). Plain $4\frac{1}{2}$ " mouldings surround the doors and windows and there is a strip of half round chair rail type moulding 4" below the ceiling.

The bathroom contains some original fixtures and is trimmed with ceramic tiles that rise to a chair rail which is 48" above the floor.

Although it could not be determined what the original interior was like on the first level the original blueprints offer a design to the buyer that provides such details as enclosed bookshelf dividers, built-in mirrors with beveled glass, built-in kitchen cabinets and a fireplace with a tile surround and wooden mantle supported by truncated doric columns.
